Advanced Photography Workshop 2025

Organized by: Photography Club, MNIT Jaipur

Date: 15 November 2025

Venue: Deeksha Sabhaghar, MNIT Jaipur

Time: 2:00 PM onwards

The Photography Club of MNIT Jaipur organized an **Advanced Photography Workshop** on **15 November 2025**, designed to deepen the technical understanding of members and introduce them to more professional aspects of photography. The session was attended by enthusiastic students eager to refine their skills beyond the basics and delve deeper into the capabilities of cameras.

The workshop began with an in-depth presentation delivered by the club's senior members, covering topics such as how a camera sensor works, the role of aperture in exposure and depth of field, the functioning of manual and semi-automatic modes, and the differences between rolling and global shutters. Participants were also introduced to various lens types, the significance of focal length, and the key relationships that govern optical behavior. The session further explored multiple photography genres- ranging from landscapes and portraits to sports, concerts, wildlife, and macro, along with the general settings typically used in each.

To make the learning process more engaging, a short quiz was conducted after the presentation. The quiz served as a quick recap of the concepts discussed and encouraged participants to think more critically about camera settings and technical choices. Students actively participated, showcasing both curiosity and competitive spirit.

Following the quiz, the workshop moved into a **live demonstration segment**, where the camera was connected to the screen, showing real time changes. This allowed every participant to clearly observe how adjustments in aperture, shutter speed, and ISO affect exposure in real time. The demonstration also included practical explanations of lens behavior, focusing techniques, and handling variations under different lighting conditions. This hands-on visualization helped participants connect theoretical understanding with real-world application more effectively.

Overall, the Advanced Photography Workshop proved to be an enriching and highly interactive experience. The participants appreciated the structured flow, from theory to assessment to live demonstration, which helped strengthen their technical foundation and boosted their confidence in using manual and semi-manual modes. The workshop marked another successful initiative by the Photography Club, continuing its commitment to nurturing photographic skill and creativity among MNIT Jaipur students.
